

I am

Steffy G P

I'm trying to

develop a river
water quality
monitoring in IOT.

But

we must measure factors
like dissolved oxygen, pH
value, temperature,
salinity and nutrients of
the water.

Because

they need pure water
for their daily needs
for farming also for
their cattle recurring.

Which makes me feel

rivers are not only the source
of water for human
consumption but they also
sustain agricultural needs and
benefit us in other ways.
